

Town Council Sets Mill Rate

Hospital Bylaw Passed

The town council at its regular meeting on Monday set the mill rate for municipal purposes at 14 mills which is an increase of 1 mill over last year. The school rate will be 12 mills and the service tax will be 4 8 10 mills.

The estimates were kept down to a minimum and only \$1000.00 was appropriated for public work but the amount required for social services and relief was increased and \$3635.00 was appropriated.

The Hospital Bylaw was given the first reading and will be sent to the Public Utilities Commission for approval. The bylaw called for raising the sum of \$30,000 for the building and equipping of a new hospital at Didsbury. An agreement has been entered into with the Municipalities of Mountain View and Westerdale whereby they will each assume the cost of the hospital. The town and the two municipalities will each assume \$10,000 of the debentures which will be spread over a period of 15 years and the annual payment for each municipality will amount to \$1,029.00.

If the bylaw is approved by the Public Utilities Commission, it will be voted on by the proprietary electors of the town.

The public works committee was instructed to proceed with the scarifying and grading the gravelled roads and streets in town and put them in good shape.

The Rosebud Hotel was given permission to place "no parking" sign in front of the hotel for the convenience of the bus.

The mayor reported attending a meeting at Innisfail of delegates from neighbouring towns to discuss the power rate with the Calgary Power Co. He stated that a committee will meet with the Power Company in the near future and that there was possibility that some adjustment in the rates would be made.

Fish & Game Association Holds Annual Meeting

The annual meeting of the Didsbury Fish & Game Association was held Tuesday evening at the C.P.R. waiting-room, with C. H. Adshead in the chair.

W. Davies gave a report on the game preserve on the Little Red Deer and stated that the experiment had been very successful. Beavers had established themselves in the preserves, and deer were often seen. Ring-neck pheasants were on the increase, but prairie-chickens appeared to be getting scarcer. He complained that there was more or less poaching occurring on the preserve and thought that a game guardian should be appointed.

It was decided that the association recommend that Mr. Chas. Bacon be appointed as honorary game warden to have jurisdiction in the game preserve.

J. A. McGhee reported that during the spring 2,000,000 trout had been distributed in the streams northwest of here.

Ken McCoy reported that the crow traps which were built last year were working satisfactorily where they were attended.

The membership fee was again set at 25c and the secretary reported that there were 55 paid up members last year.

The following officers were elected: President J. A. McGhee, Vice-president Ed Ford, Secretary J. E. Gooder.

Fish Committee: C. E. Rieber, Jack McCloy, W. Smith, J. Kirby, I. Johnson.

Big Game: Ken McCoy, Cecil Adshead, Ed Ford, Irwin Klein, Bert Fisher, Frank Heselson.

Game Birds: Russell Ady, W. Davies, Jim Calhoun, Ed Watkins, James Hosegood, Percy Lunt.

Pest Committee: Ed Ford, Alf Brusco, Alex McNaughton and Bill Gillerie.

Membership Committee: Cecil Adshead, W. Gillerie, W. Davies, Ken McCoy, Jack Topley.

A drive for membership will be made. The fee is put at the nominal sum of 25c as it is felt that with a large membership the interest in the protection and propagation of fish and game will be increased.

Items of Interest

The eagerly awaited results of the judging in the western region of the General Motors "Safety Slogan Contest," involving three new motor vehicles and seventeen cash prizes up to \$300, were announced on June 30th.

To Walter G. Benton of Prince Albert, Sask., goes first prize of a 1938 Pontiac. Second prize, a 1938 Chevrolet Edmund J. Jelinski of 2073 Atkinson St., Regina, Sask.; and in third place is Paul Bergstrom of Newton, B.C., who receives a 1938 GMC half ton Truck.

Throughout the provinces of Manitoba, Saskatchewan, Alberta and British Columbia are distributed the remaining cash prizes. All awards are based on the highway "Safety Slogans" submitted by the contestants in the four western provinces, during the six weeks of the contest's duration, ending May 31st 1938.

"BUY IN DIDSBURY"

WEDDINGS

YOUNGS-RAY

On Thursday, June 30th, the home of Mr. and Mrs. R. C. Ray was the scene of a very pretty garden wedding when their daughter, Hazel, was united in marriage to Mr. Ross Youngs. The ceremony was performed under a beautiful floral arch, Rev. J. R. Geeson officiating.

The bride looked lovely in a dress of mauve brocaded sheer and veil, carrying a bouquet of white peonies and yellow iris. Miss Dorothy Youngs, sister of the groom, acted as bridesmaid, wearing a dress of pink brocaded sheer and carried a lovely bouquet.

The bride's three small nieces, Greta Ray, Yvonne Thompson and Carol Ray acted as flower girls. The groom's attendant was Mr. Howard Ray, brother of the bride.

Hazel is the youngest daughter of Mr. and Mrs. R. C. Ray and Ross is the son of Mrs. Charles Youngs and the late Mr. Charles Youngs of Didsbury. Their marriage united two of the oldest pioneer families in this district.

Only the immediate relatives were present at the ceremony. The wedding march was played by Miss Geeson and during the signing of the register, Mrs. Henry Thompson of Seattle, Washington, sister of the bride, sang "O Promise Me."

A buffet luncheon was served, Mrs. Jesse and Mrs. Glen Ray pouring the tea.

The bride and groom left for a short motor trip, after which they will be at home to their friends on their farm west of Didsbury.

N. Nowak returned on Sunday from attending the convention of the Western Canadian Association for the Deaf held at Calgary last week. He reports that there were 88 delegates from four western provinces and 30 delegates from U.S.A. They had a splendid convention and as part of the entertainment they took trips to Banff and Turner Valley.

Complaints have been received about the driving of cars on the race track at the fair grounds during the wet weather. The horsemen have spent considerable time and money getting the track in shape for racing and it is extremely unfair to these sportsmen that thoughtless motorists should spoil their efforts by driving their cars on the track when it is wet.

Calf Club Will Hold Demonstration

The Didsbury Dairy Calf Club is holding a demonstration meeting on preparing and showing a calf in the show ring. The meeting will be held at Tom Morris' place on Saturday night, July 9th, from 7 to 8 o'clock.

Prohibits Cow Grazing On Fair Grounds.

Notice is hereby given that the grazing of cattle or horses on the Fair Grounds and on the Butte is prohibited.

Proceedings will be taken against persons having cattle or horses either picketed or loose on these grounds
—Town of Didsbury.

Knox United Church Notes.

There will be no services at Westcott and Westerdale during July.

During August the services will be at Westerdale at 2 p.m. and Westcott at 4 p.m.

In town the services during July will be in charge of Rev. N. W. Whitmore B.A., of Olds, who will gladly render all needed services during the absence of the minister.

Scout and Cub Corner.

Scouts will muster 7:30 sharp at the depot this (Thursday) evening for a hike, weather permitting. This will take place of the regular Friday meeting.

A good turn-out of Cubs is expected this week, as uniforms are to be distributed.

Flagging: Saturday night Legion Hall, 7:30.

POUND NOTICE

Impounded in the pound kept by Henry Farrant, located on the S.E. 4-32 3 5, on the 14th day of June, 1938, and sold on the 25th day of June, 1938:

Bay mare, white face, two white hind feet and one white front foot, no visible brand; to Ivan Graham of Didsbury.

Impounded in the pound kept by Henry Farrant, located on the S.E. 4-32 3 5, on the 21st day of June, 1938, and sold on July 2nd, 1938:

Red four-year-old heifer, no visible brand; to Frank Ingham of Harman, Alberta.

For information apply to:

A. McNaughton, Sec.-Treas.
M. D. Westerdale 311
Didsbury, Alberta.

Rosebud Hotel Changes Hands

The Rosebud Hotel changed management the first of the month having been purchased by Mr. Frank Mainfroid of Edmonton.

Mr. Mainfroid, who also operates the King's Hotel at Edmonton and the Strathcona at Nelson, B.C., is a hotel man of long experience, having started in the business 45 years ago.

Mr. Bob Howie, who was manager of the hotel for several months is being transferred to another point after taking his vacation.

Mt. View Co-Op To Hold Field Day

Mountain View Co-operative Livestock Association will hold a field day Saturday, July 16th, at the Olds school of Agriculture. A good program of speakers will be heard during the afternoon. Everybody welcome. Hot coffee and ice cream will be served at noon. Please bring lunch baskets.

A Vital Issue

With the march of time and as the question becomes increasingly ventilated in the press and on the public platform evidence emerges that many conflicting viewpoints will have to be reconciled or compromised before the Canadian constitution is amended or redrafted to the satisfaction of the people generally.

Until the report of the Rowell Commission on Dominion-provincial relations is published it is conceded that little action can be taken as, the country is generally of the opinion, that considerable weight will have to be given the commission's recommendations, whatever they may be, before the first steps towards the revision can be taken.

No doubt it will be some time yet before the Commission is ready to give a considered opinion on a topic of such great importance when it is remembered that widely varying opinions have been submitted to that body to date and when the fact is taken into consideration that their decisions, if implemented, are going to involve the future welfare of the entire nation for many generations to come.

Even after the Commission has submitted its findings to Parliament, there can be little doubt that some considerable time will have to be devoted before public opinion can be sufficiently crystallized to enable the representatives of the people to decide what program should be followed if the desired objectives are to be achieved.

Must Retain Fundamentals

The course that must ultimately be pursued, if the amended constitution is to be really effective, must not only reconcile a wide range of opinion, but must ensure that the new instrument is sufficiently elastic to enable it to meet future requirements in an age of changing viewpoints and of rapid progress and yet must be stable enough to ensure the retention of certain well established, fundamental democratic principles.

Having in mind these facts, or rather, these requirements, those who have had the privilege of hearing or reading the addresses which have been made recently throughout the West by Vincent C. MacDonald, Dean of the Law School of Dalhousie University, cannot fail to have been impressed with the immensity of the task ahead, of the far-reaching effects of the decisions which will ultimately be made and, therefore, of the necessity of the work being placed in the hands of men who will not be swayed by political considerations of the moment, but who are capable of bringing to bear wisdom, capacity, vision and courage.

Some of the fundamental principles which underlay the act of union and which must be incorporated in a revised constitution, as Dean MacDonald says, are the preservation of minority rights and retention of provincial autonomy.

The necessity of maintaining these two important principles can readily be understood in the light of the necessity of providing for a revised constitution which will meet with the approval of all sections of the country.

While in any democratic regime the will of the majority must prevail, at the same time there are minority groups who have been accorded rights and privileges, and provision must be made for their continuance if harmony is to reign. When it is made abundantly clear that there is no intention of doing anything else but safeguard such rights some of the opposition to constitutional amendments will disappear automatically.

Obstacles To Overcome

Instancing some of the problems which have to be solved before a satisfactory revision can be implemented, Dean MacDonald pointed out that there are several obstacles to be overcome before even the necessary initial amendments can be made operative.

The first of these is the fact that the British North America Act is a statute of the Imperial Parliament and it is impossible to change it except through that Parliament. The second is the political theory that Confederation is a contract and that, therefore, the terms can be changed only with the consent of all provinces—something so far impossible. The third is the difference of opinion regarding the method of changing act.

The last-mentioned, itself, is a bone of contention comprising many views which will have to be harmonized or compromised. For instance, as Dean MacDonald pointed out, there are some people who believe that Canada should get whatever amendments are required immediately. "Others would first secure the power to amend the act so that amendments can be made as they are required. Connected with this is the fact that some believe the power to amend should be acquired by Canada so that amendments could be made here while others believe the amending power should remain in London."

Enough has, however, been said to give point to the comment that the task is a big one and that the decisions which may be reached are bound to be of immense import to the future welfare of the Dominion. On these results hinge the future happiness and prosperity of a young and vigorous nation and the contentment of millions now living and millions yet to be born.

The population of Wales, which showed a steady increase for 120 years has been decreasing for 16 years.

Story About A Goat

Nanny drank a pan of gasoline—and then exploded. That's the story of Arnold Garlo and Melvin Miller, tenant farmers of Carlinville, Ill., as they explained the fate of their pet nanny goat. The goat drank the contents of a dishpan. Presently one of the men lighted his pipe and tossed the match to the ground. Nanny sniffed. Her whiskers ignited. Blooie. Nanny doesn't live there anymore.

Undermines Character

Professor Tells Graduates Devotion To Swing Music Is Harmful

A University of Pennsylvania professor told Keuka College graduates that the minds of America's "jitterbugs" devoted to a "master of swing" will never "lay hold upon anything worth while in life."

Delivering the baccalaureate sermon before 52 seniors at the girls' college, Prof. John Langdon Jones of the Romance language department brought up the subject of swing music in connection with character and "what your choices are doing to you spiritually."

"There is no more conspicuous illustration of this sort of thing than in our taste for popular lyrics," the educator, who is a member of the Keuka College board of trustees, said.

"Mark you," he explained, "I do not leave the room when I hear a lilting tune; an occasional bit of frivolity and silly music I can conceive as being diverting. That is not what I mean."

"I am speaking of the impact upon the reason and upon the soul by things to which we give a superficial devotion; of what happens to people when they have to be keyed up to this or that popular air; when high school students, as they did in Philadelphia not long ago, practically stampeded theatre aisles to be 'jitterbugs', giving witness to their devotion to a 'master of swing'."

He said that type of person will have a "cheap standard of values to which things of beauty and a beautiful life will have little appeal. Nor will their minds lay hold upon anything worth while."

HARD LUMPS CAME ON HER LEGS

Ankles and Feet Swollen With Rheumatism

Rheumatism sent this woman to bed with lumps, swellings, and inflammation. Yet these symptoms soon disappeared, as they always will do when the root cause is removed. This letter tells you the method she used:—

"I was taken ill with terrible rheumatic pains in my legs. They were badly inflamed, swollen, and they were partly covered with red, hard lumps. To put my foot down to the ground was agony. After I had been in bed for 16 days, suffering agony all the time, my husband said, 'You can't go on suffering like this, let us try Kruschen Salts.' He got a bottle, and almost from the first I felt benefit. Before long, I was completely relieved—swellings, inflammation, and lumps all gone—and I am up again and doing my housework." —(Mrs.) E.L.

Do you realise what causes a good deal of rheumatic pain? Nothing but sharp-edged uric acid crystals which form as the result of sluggish eliminating organs. Kruschen Salts can always be counted upon to clear those painful crystals from the system.

Teach Aerial Navigation

Diploma Course Established By The University Of Toronto

Establishment of a diploma course in aerial navigation was announced by the University of Toronto. Honor matriculation will be necessary for admission to the course, which begins October 1.

Instruction in mechanics, applied physics, chemistry and other studies will lead to qualifying examinations for commercial and transport pilots, navigators, dispatchers, operating meteorologists and radio operators. The course will cover two years.

Applicants must be British subjects and qualify under physical standards set by the Department of Transport. Before beginning his second year, the student must have obtained at least a private pilot's certificate.

Music As Unifier

Music, Sir Hugh Robertson told the Association of Canadian Clubs, is the best "unifier" Canada could have. The distinguished adjudicator and director of the famous Orpheus Choir suggested members of Canadian Clubs throughout the Dominion might aid in the propagation of culture, a difficult problem in a new country.

When something unusual takes place, many motorists quickly park their cars and join the crowd. The result often is a traffic jam and new hazards.

Selecting Art Exhibits

Canadian Paintings And Sculptures Will Be Shown In London

An exhibition, "A Century of Canadian Art," representing Canada's achievements in painting and sculpture during the past 100 years, will be held at the Tate gallery in London this fall, it is announced by Vincent Massey, Canadian high commissioner. The exhibits are to be selected in Canada and will be shown at the gallery for two months from Oct. 14. The Duke of Kent has accepted an invitation to open the exhibition. An advisory committee composed of the presidents of the Canadian artists' societies has been collaborating with the National gallery in selecting the works to be shown. About 200 pictures and pieces of sculpture will be included.

Not Very Dignified

May Be Reason Elderly Man Discontinues Favorite Stunt

W. Maurer, a retired farmer of Dale, N.Y., was persuaded recently to forego his customary birthday stunt of standing on his head. He is 83 years old. It is not reported just how Mr. Maurer was persuaded, but the classic presentation of the negative in a precisely similar situation runs: "You are old, Father William," the young man said, "And your hair has become very white; And yet you incessantly stand on your head—Do you think, at your age, it is right?" —New York Times.

Judging by body measurements of over 500 women, a kitchen table should be 30 to 33 inches high, an ironing board 31 to 33 inches, a sink 31 to 32, and top shelves for china 72 to 74.

A Perfect Quartz Crystal

One Of Largest And Finest Was Mined In Brazil

Ending a journey of more than 7,000 miles on mule-back, boat and railroad, a sixty-three-pound perfect quartz crystal, one of the largest and finest ever mined, arrived at the Bausch & Lomb Optical Company, Rochester, N.Y., from a mine in the province of Minas Geraes, 1,500 miles from the Brazilian seacoast.

Found in a region famous for its gem stone output, this giant crystal of quartz a dioxide of silicon chemically identified with ordinary sand, will be used in the manufacture of special lenses for microscopes. Quartz, unlike glass, passes ultra-violet light, commonly used to obtain extreme magnifications. Scrap quartz of high quality, left over from lens and prism manufacture, is used as part of the "melt" in making optical glass.

Will Need Them Later

Educational Leaders In China Not Drafted For War

While China has a sufficiently large reserve of arms to last two years, she refuses to draw on the ranks of students and educational leaders to man the guns, Rev. Dr. A. E. Armstrong, chairman of the United Church's foreign missions board, told Montreal and Ottawa conference.

Such men, he said, are not permitted to enter the army because they will be used after the war to direct vast reconstruction work.

Speed King (as he slowed down a bit): "Gosh! Don't you feel glad you're alive?"

Passenger: "Glad isn't the word. I'm amazed."

Severe Drought In Europe May Be Ally For Peace On Account Of Wheat Shortage

Peace has found an ally in the drought—in some areas the worst in generations—which has swept Europe this spring and drastically reduced wheat crops, dispatches indicated.

Not only has the drought interfered with plans for building up wheat reserves, but it has faced some nations with the unexpected problem of buying wheat abroad in tremendous quantities for normal consumption.

Italy bought another three cargoes of wheat on the Baltic exchange in London recently, supplementing nine cargoes bought in the previous ten days. Baltic exchange members predicted that Greece and Portugal would have to make similar purchases.

Emphasizing the effect of the drought, a United Press despatch from Rome quoted a usually well-informed source as saying that as soon as an Italian delegation returned from Berlin, where it negotiated a commercial and tourist accord, it would open trade and economic talks with Russia—target of the Italian-German-Japanese "anti-comintern" alliance.

The despatch said that despite unfriendly relations with Russia, Italy expected to purchase about \$100,000,000 worth of wheat from the Soviets after the coming harvest.

Despite late spring rains, the despatch said, the long, severe drought throughout the Italian peninsula badly damaged the wheat crop and obliged the Italian government to import foreign wheat in large quantities to meet internal needs.

The most optimistic Italian crop estimates, the despatch said, gave the prospective crop at about 6,000,000 tons, which is 2,000,000 tons short of home consumption needs.

As contrasted with Italy, France enjoys the prospect of a good wheat crop, even though shortage in all fodder cereals has caused the government to take measures to increase imports.

The French national wheat office announced, a United Press despatch said, that a wheat surplus of 90,000,000 quintals (approximately 9,000,000 long tons or 330,000,000 bushels) was anticipated. The official journal said that 5,059,380 hectares (12,500,000 acres) had been plowed for wheat as of May 1, compared to 5,154,000 hectares (12,736,000 acres) May 1, 1937.

Experts foresaw that the drought might make it necessary for some countries—particularly the so-called totalitarian states—to divert funds from armament programs to wheat purchases. They recalled the opinion expressed some months ago by a German military authority: "You may be able to end a war on bread ration cards but you can not start a war on them."

Germany itself seemed comparatively lightly affected. Experts had expressed opinion that serious drought might have affected Germany severely because of an already existing shortage in fats due to national concentration on the four-year plan of economic self-sufficiency.

Great Britain, Switzerland, the central European and Balkan countries generally, and Morocco were affected by drought.

Britain has embarked on a gigantic program of buying not simply because of the drought but in order to build up a war reserve of all essential foods. Britain normally imports 76 per cent. of its wheat.

Italy, because of the anticipated shortage, recently decreed that at least 20 per cent. of corn or rice must be mixed with wheat in bread. A United Press despatch from Arrezzo, Italy, said that two flour mills there had been closed for three months, charged with violation of the decree's provisions.

When Beau Brummel, Britain's dandy of a century ago, was asked for a penny by a London street beggar, he haughtily replied, "I never heard of such a coin, my man. Here's a shilling."

A near-riot was caused by the first wagon load of limburger cheese made in the United States when it was driven through the streets of Monroe, Wis.

Disliked Modern Ways

Eighty-Seven-Year-Old Recluse Lived Alone And Liked It

Miss Nancy Thompson, 87-year-old recluse who lived on a 300-acre farm only four miles west of Perry, Michigan, made her first visit to the town in 30 years when she went unwillingly to Memorial Hospital for treatment of a hip fracture. She died there.

She had lived alone in the home her father built over 80 years ago since the death of her parents. For the first and only time in her life she rode in an automobile ten years ago when a lawsuit required her presence in a nearby town. She discovered the modern miracle of radio and moving pictures and attended one show. She never attended another.

She had heard of linoleum, electric and gas stoves and refrigerators but she never had seen any. Her small venture into modern life never excited her desire for any of the things her neighbors considered necessities.

She maintained her home until her death as she had seen it when she was a little girl. All the furniture in her home were antiques simply because she never had purchased any other since her parents moved in their belongings of nearly a century ago.

Through her years of solitude she kept the same Nottingham curtains at the windows, the same rugs on the floor, the old mahogany pedal organ, with inlays of rosewood, at its exact angles across the corner of the room and the spinning wheel in another corner.

She was largely left alone by residents of Perry but was not disliked. She liked to talk with occasional visitors. In the hospital she told a nurse she lived alone because she liked it. "Always going places and talking—talking is plain rubbish—makes you die too young," she said.

Early in life she met disappointment in a romance. The wedding gown she never wore still is packed in one of the trunks in the old home.

WHEN THE PAPER DOESN'T COME

My father says the paper he reads ain't put up right; He finds a lot of fault, too, he does, perusin' it all night; He says there ain't a single thing in it worth to read.

And that it doesn't print the kind of stuff the people need; He tosses it aside and says it's strictly on the bum; But you ought to hear him holler when the paper doesn't come.

He reads about the weddin's and he snorts like all getout; He reads the social doin's with a most derisive shout; He says they make the papers for the women folks alone;

He'll read about the parties, and fume and fret and groan. He says of information it doesn't have a crumb; But you ought to hear him holler when the paper doesn't come.

He is always first to grab it and read it plum clean through. He doesn't miss an item or a want ad—that is true;

He says they don't know what we want, the d'm newspaper guys; "I'm going to take a day some time and go and put 'em wise;

"Sometimes it seems as though they must be deaf and blind and dumb."

But you ought to hear him holler when the paper doesn't come.

—Cambridge North Star.

To Locate Oil

Explosives are being used in a search for oil in Western Papua. Deep holes are bored and dynamite is exploded in them, delicate instruments recording the effect on the rocks far below. From this it can be told whether oil is likely to be found.

German trains will in future have compartments reserved for the use only of mothers travelling with small children.

Canada's Reindeer Herd

Reports From North Show Herd Is Increasing In Numbers

Progress reports on the fawning of Canada's reindeer herd, just received by the Department of Mines and Resources, Ottawa, reveal that approximately thirteen hundred fawns had been added to the herd at the end of the first week of May. Fawning began about the first of April and was expected to continue until about the end of May. Complete figures will not be available until the July round-up, but a marked increase over the 1,181 deer born last year is indicated.

The herd has shown steady growth since the original 2,370 reindeer were delivered to the reindeer station in the Mackenzie Delta area in 1935. Notwithstanding the usual losses incidental to reindeer herding, and the annual slaughter of surplus stock (steers and aged females) to provide food and clothing for local needs, the deer numbered more than four thousand at the last round-up. The animals as a whole have adapted themselves to the climate and local conditions on the reservation, and the herd has now developed to the stage where extension of the reindeer industry in the interests of the Eskimo population is receiving serious consideration.

Several Eskimos have been in training with the Government herd, but it is now proposed to establish a native herd and to increase the opportunities for the younger natives to learn reindeer husbandry. The plan being considered at present is to separate eight or nine hundred deer from the Government herd and place them in charge of two native families under the supervision of a Government officer. These deer would then be regarded as a native herd distinct from the main herd, and would be moved gradually eastward in the general direction of the Coppermine River, their ultimate destination to be determined later. It has been suggested that they spend the first year at least in the vicinity of Anderson River, about one hundred miles east of the Reindeer reservation, where a preliminary investigation has indicated that conditions generally are suitable for the herding of the animals.

Although the natives who may be entrusted with the management of a reindeer herd will be largely responsible therefore, the deer will remain the property of the Government on the understanding they are loaned and that a herd of corresponding size and condition must be returned eventually. This arrangement would permit the natives to secure ownership of the natural increase which may result from the care the animals receive. Such native deer would also be subject to revert to Government ownership if not properly herded.

Aborigines Like Movies

Aborigines in Darwin, North Australia, take their movies so seriously they hike hundreds of miles and swim crocodile-infested rivers to see the show at the local cinema. Six natives made a four-months' journey from the northeastern end of Arnhem Land through hostile territory.

Will Study Possibilities Of Converting Solar Radiation Into Electrical Energy

Financiers And War

History Would Go To Show That War Impoverishes The Nation

The great industrialist of his age, and undoubtedly a public benefactor, Henry Ford is not good at history. Nor are his judgments outside industry always sound.

Recently Mr. Ford talked to reporters, and one of the things he said was this:

"Somebody once said that 60 families have directed the destinies of the nation. It might well be said that if somebody would focus the spotlight on 25 persons who handle the nation's finances, the world's real war-makers would be brought into bold relief."

But why should those alleged 25 persons "who handle the nation's finances" want war? What good would war bring them?

War, in the last analysis, can't enrich anybody. As waged in this age, with its threat of bankruptcy for all nations, and with its consequence of impoverishment for whole populations, it can bring nothing but universal poverty.

Always, to a degree, it has been so. The Napoleonic wars which England waged and financed reduced the English working class to a state of poverty so dire that the conditions of our unemployed to-day seem by comparison like affluence. The War of 1812 brought a terrible depression to the United States. Under such conditions, neither industry nor finance can prosper. The last examination, the prosperity of finance and industry must depend upon the prosperity of the masses. Wrote a Spanish historian: "Spain was the richest country in the world until she made war on the England of Elizabeth, since when she has been the poorest."

World industry and world finance have not yet recovered from the upheavals of the Great War. They might well be extinguished entirely by another world war. In those clear circumstances, to talk of the leaders of finance plotting another war is to talk less than common sense.—Ottawa Journal.

Twenty Years Late

Postcard Took Long Time To Reach Its Destination

It has taken a post card, from Des Moines, Iowa, nearly 20 years to reach its destination, Bethune, Saskatchewan. Mailed by Josua Dobson Nov. 6, 1918, to his sister, Mrs. F. Mountanay, the card reached Bethune Monday, June 6. Both sender and receiver are dead. The card depicts the first expeditionary troops of the U.S.A. ready for France. The card was received by Mrs. T. Mountanay.

The new Bellanca "Junior" is a three-place, full cantilever, low-wing monoplane which cruises 500 miles at 110 miles an hour. It has a top speed of 130 miles an hour and is reported to sell at \$3,150.

Airy Crochet - The Rage in Gloves

Household Arts by Alice Brooks

Livened by Vivid Embroidery

PATTERN 6143

A lacy glove, crocheted in two pieces, whipped together. Embroidery in two contrasting colors (so smart now) adds that expensive look! Pattern 6143 contains instructions for making them in a small, medium and large size; materials needed; illustrations of gloves and of stitches.

To obtain this pattern send 20 cents in coin (stamps cannot be accepted) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Dr. Godfrey Lowell Cabot, a life member of the Massachusetts Institute of Technology Corporation, has offered to that institution \$647,700 to be known as the Solar Energy Fund, the income to be devoted for 50 years to search for direct methods of converting the sun's energy into power or storing such energy for future use. After half a century the corporation can use the income for any purpose it may elect; Dr. Cabot apparently believes that five decades should prove an ample period in which to prove that the research he has in mind is fruitful or unfruitful.

To harness the sun's rays as they impinge on the surface of the earth has been the dream of many physicists, as well as of many imaginative persons not hampered by scientific understanding. Did not Archimedes destroy the Roman ships by firing them with a burning glass? Do not writers of mystery fiction, by intercepting the sun's rays with a goldfish bowl, seek to destroy the evidence of the crimes their puppets commit?

Solar engines are familiar in the field of experimentation; Herschel, Mouchot, Ericsson, in the immediate past, studied their possibilities; Brooks of the University of California has conducted highly interesting studies on the subject, with encouraging results. Last year Dr. Cabot established at Harvard the Maria Moors Cabot Foundation for Botanical Research to study the growth of vegetation, with primary interest in increasing the storage of solar energy as a plant product that may be grown as a crop. The Solar Energy Fund is the outcome of his recognition that utilization of solar energy is possible through agencies other than plants.

Describing the method of approach to the problems involved, the Technology Review says that "the first objective will be to determine whether the direct use of sun energy is now economical and feasible, and if so for what purposes and under what conditions", and that the research program may be divided into three major fields of investigation: Study of means for utilizing solar heat to operate engines to deliver mechanical power, study of the possibility of using electrical apparatus to convert solar radiation into electrical energy, and study of chemical conversion of sunlight into forms available for work.

A committee for scholars will direct the research. Meanwhile, it will be well for householders to fill their coal bins and contract for their fuel oil for the Winter of 1938-1939.

Woman Made Quilt Out Of Scraps Of Their Wearing Apparel

An energetic woman in Chicago who made a quilt out of scraps of celebrities' wearing apparel has refused the offers of a number of museums, explaining that the quilt was made for her grand-daughter, Agnes.

What proportion of the world's celebrity population is represented may be suggested by the fact that the quilt took more than six years to make, and holds some 10,000,000 stitches.

Patches have been contributed by celebrities in all walks and callings, not excluding royalty and highly-placed dignitaries in many countries.

A Valuable Find

A party of Russian school children searching for fossils discovered rich deposits of fossilized fish near Lake Ladoga on the borders of Russia and Finland. The discovery is of such importance that experts of the Paleontological Institute will carry on excavations.

Boys make a better church choir than any other collection of soprano voices, said Dr. Sydney H. Nicholson, director of the English School of Church Music.

Mrs. Fannie Mumsen, known as "Grannie" and believed the oldest woman in the Salvation Army in South Africa, died at 90 in Pretoria.

The World of Wheat

By H. G. L. STRANGE
Director "Crop Testing Plan"

The Canadian Seed Growers' Association met towards the end of June for what was in effect its 53rd Annual Convention.

Thousands of farmers no doubt will have read this announcement in the press, and will think perhaps it is of little or no concern of theirs.

The fact is, however, that if thirty years ago the late Dr. James W. Robertson, the late Sir William C. MacDonald and Mr. George H. Clark, who until recently was Seed Commissioner of Canada, had not had a remarkable vision about seed selection, it is quite probable that Canadian wheat would not have the reputation it enjoys today on World's markets, that consequently much less wheat each year would have been exported, therefore much less produce, hence that the population of Western Canada would be considerably smaller than it is.

Members of the Canadian Seed Growers' Association, for thirty eight years, have maintained in a pure state such important varieties as Red Fife and Marquis wheats, and have made large quantities of pure seed of these varieties available to farmers at reasonable prices.

The Canadian Seed Growers' Association, I suggest, deserves well of every farmer, and of all those who depend upon farmers for a living, in Western Canada, for it has made, through the efforts of its members, vitally important contributions towards the advancement of Canadian agriculture.

Following factors have tended to raise price: Rust increases in the United States -- Continental port stocks very small -- Norway purchases new crop wheat and rye -- 1937 wheat crop of China, Manchuria and Japan much smaller than 1932-36 average -- Heavy rains retard Kansas harvest -- Netherlands to create war food reserves.

Following factors have tended to lower price: Much needed rains occur over northern parts of prairie provinces -- New Russian wheat of excellent quality -- Expect Balkan wheat surplus of 80 million -- Improvement in Italian prospects -- Beneficial rains in Australia -- Large rye supplies in prospect in U.S. -- European rye prospects much better than 1937.

Searle Precipitation Report No. 5

The precipitation which has occurred from April 1st to June 27th, inclusive, combined with that which occurred last autumn during the months of August, September and October, and weighted for wheat acreage, shows the moisture condition for the three Prairie Provinces as a unit to be 86 per cent of normal, as compared with 88 per cent last week and 90 per cent for the week before that.

The moisture condition in Alberta on June 27th was 90 per cent of normal as compared with 92 per cent last week and 97 per cent for the week before that.

For Saskatchewan, on June 27th, the condition was 85 per cent as

Alberta Crop Report.

Issued by the Alberta Department of Agriculture

JUNE 28th.—Crop conditions for the southern parts of the province are very favourable, according to the crop report issued under the direction of Hon. D. B. Mullen, minister of agriculture. The northern portion has not so favourable an outlook, since there has been a lack of moisture. Some heavy rains of an inch or more have covered large areas in the recognized drought area. These rains have ensured good growing conditions and supported the heavily stood crops. Such conditions permit rapid recovery from insect damage, and have minimized soil drifting, since crops are now tall enough to effect shelter. All grain is seeded, except for some reseeded in the north where cutworm damage is evident. The Peace River country and the territory north east of Edmonton are particularly dry.

Hoppers have completed hatching over a large area. In the most heavily infested areas good rains have reduced the damage considerably, although south-east of Edmonton more damage is reported, not altogether from the infestation, but partially because of lighter crops and less rainfall. It is to be noted that poison-bait has given remarkable kills and effective control.

Forage crops in irrigated districts have made splendid growth and haying has started. Some prairie wool and rye for hay is being harvested. The country where most forage crops are grown has not completed seeding, through lack of rain.

Ranges and native pastures in the south have not been so productive for many years, and the parts that are not over grazed are producing seed. The drier parts of the province report pastures deteriorating which are normally green at this season. Stockmen report cattle fattening rapidly and calves making rapid growth.

The wheat acreage for the province has been increased by approximately 7 per cent. Oat acreage has increased in the mixed farming area about 3 per cent, while barley remains normal. Fall rye has increased in crop districts 1 and 2 30 to 50 per cent, but the total acreage has not increased over 12 per cent, the principal increase being in the drought area. Coarse grain acreages in the northern part of the province have decreased slightly because of drought and reluctance to seed before general rains.

Livestock is reported in excellent to good condition in almost all parts of the province. In the Peace River district and in the territory north-east of Edmonton general rains are required to improve pastures. Improved feed conditions and favourable price for fat cattle are creating some demand for replacement stock. The lamb crop is satisfactory and spring calves are in good condition. Poultry are doing well according to reports received.

Production of dairy products is reported strong despite the lower price level. At a number of points considerable increase in production has occurred, due to favourable pasture conditions. For the three weeks ending June 18th the estimated increase for butterfat over the corresponding period of 1937 was 26.2 per cent. Estimated increases of butterfat for particular areas are: North 33.4 per cent, central 18.9 per cent, and south 28.3 per cent.

compared with 86 per cent last week and 89 per cent for the week before that.

For Manitoba, on June 27th, the condition was 85 per cent as compared with 84 per cent for the previous week and 87 per cent for the week before that.

As this report is being compiled precipitation is still occurring over various parts of the prairie provinces, some portions of northern Saskatchewan and Alberta being the recipients of much needed moisture.

How Does Life Insurance Benefit The Farmer's Wife and Children?

Answer.—If the farmer has Life Insurance, the wife and children know that they will not be in want in case of his death.

Question.—How would insurance help?

Answer.—It would provide money for living expenses, to pay debts, meet mortgage payments, hire help, avoid sale of the farm at a sacrifice.

Q.—Couldn't this be done through ordinary savings?

A.—Usually a farmer leaves only a small amount of cash. Nor can he be sure to live long enough to save an adequate sum. Only through Life Insurance can he, with a minimum of saving each year, have the necessary money available in case of death.

Q.—How do the children benefit?

A.—The father who has Life Insurance is sure that the children will have the home, care and education that he intended.

Q.—How does Life Insurance benefit the farmer himself?

—If he lives to a retiring age, his insurance will provide a cash income to care for him.

Mountain View Notes

The closing day picnic of the Mona School was a very happy affair for all who attended. The ball game was a victory for the school children. After that exertion ice cream was served to all. After the races, sandwiches, cake and lemonade ending up with ice cream was served. The teacher, Miss Goldie, was presented with an engraved tray from the school district and a gift of china from the children, besides other gifts of glassware from different families of the district. All joined in a sing song and cheers to wish her happiness in her forth coming marriage.

A novel feature of the afternoon was a program of songs by the little children with, among other items, a French song and an action song which was very dainty and somewhat striking for the distant thunder rolled now and then as if to accent the young voices.

All enjoyed a wonderful afternoon and were thankful that the rain held off, for the children's sake, until Friday.

Consider Establishment Of Cheese Factory

A meeting was held at Neapolis School on Monday night to consider the feasibility of establishing a cheese factory in the district. Mr. Hugh Roberts occupied the chair.

A committee comprising Messrs Ed. Liesemer, J. O. Wiebe and J. Peters was appointed to visit the cheese factory which had been established at Swallow and get information and statistics which will be presented to a meeting which will be held in the near future.

IN MEMORIAM

MARDON.—Sacred to the memory of Eric Gabriel, son of Mr. and Mrs. Charles Mardon, who lost his life by drowning in the Lone Pine Creek on July 5th, 1933. Aged 10 years.

They told us we'd forget you,
When someone had taken your place.
They knew not the depth of devotion,
The love that you cannot efface.
The springtime, the sunshine and flowers
Would hold naught of sweetness to us,
If we had forgotten the hours
We spent, little darling, with thee.
Forget you, the words have no meaning,
Because we could never forget.
When the world, all the world, has for-
gotten,
We will slumber and dream of you
yet.

Rest in peace, our little cradle sweet-
heart, until we come to thee.—Mammy,
Daddy and Charlie.

**The Industrial East
Spends over \$40,000,000
with the Western Farmer each year**

Any fellow who consumes over \$40,000,000 worth of Western goods is worth knowing. And when you know him, you'll find he's a pretty good fellow — a worker and a family man like yourself, who likes to keep busy.

Your purchase of a Canadian-built car helps keep him busy and on a payroll. For Eastern automobile plants alone employ over 18,000 workers and in turn, spread employment — and purchasing power — over many other industries, including textiles, paints, glass, chemicals and steel.

Sure, it's a good thing to know that the Eastern industrial worker is busy and happy and in a position to maintain and augment his purchases which in 1936 alone included over 80,000 tons of fresh dressed meats, 175,705 head of cattle, 21,144 calves and 41,557 hogs to say nothing of 10,000 tons of butter and poultry, eggs, honey, grain products and other commodities to the value of more than \$15,000,000.

For statistical and further information about this industry, write to
Automotive Industries, 1006 Lumsden Building, Toronto.

AUTOMOTIVE INDUSTRIES

WORLD HAPPENINGS BRIEFLY TOLD

Sweden marked the 80th birthday of King Gustav by establishing a national fund for fighting infantile paralysis.

Two research workers reported a slow, steady spread of undulant fever was making it one of the major disease threats in the United States.

The British Columbia government collected \$3,446,271 in forest revenues last year, larger than any year since 1929, Hon. A. Wells Gray, lands minister, said in his annual report.

Malcolm MacDonald, colonial secretary, told the House of Commons the government is considering sending more troops to Palestine to maintain order.

While nearly 900 revellers danced on, an armed bandit held up Miss Mabel Berry, cashier of the Palais Royale dance hall in Toronto, and escaped with \$350.

Only man to swim the English Channel both ways—France to England, 1927; England to France, 1934, E. H. Temme is retiring after 20 years' competitive swimming and water polo.

Don McLeod of Winnipeg, believes he holds the long-distance record for model aircraft. His plane with a gasoline engine no larger than a bowl of a pipe, flew from Winnipeg to Starbuck, Man., a distance of 35 miles, recently.

The Canadian Tuberculosis Association's 38th annual meeting in London, Ont., learned sales of Christmas seals in Canada to aid tuberculosis control work increased 13 per cent. last year over the previous year and brought \$155,000 in revenue.

Disfranchisement of relief recipients after they had received public assistance for two years was advocated by W. C. McKinnell, Manitoba supervisor of municipalities, in an address before the western district union of Manitoba municipalities.

The Hawker Hurricane

Fastest Fighting Plane In Air Force Service Belongs To Britain

Britain has now in commission the fastest fighting machine in service in any air force. It is the Hawker Hurricane, the plane that made the trip to Edinburgh at 408 miles an hour, but that has been kept on the semi-secret list until just recently. Now it has been issued to the squadrons.

On its record-breaking trip it was helped by a strong tail wind, and its real top speed is not known to any outside the Air Ministry and the pilots, but observers guess it can do between 300 and 335 miles an hour. This would give it 280 miles as cruising speed for patrol work. Its tank capacity will allow it to do 700 miles without refuelling, a record achievement for its kind.

It can climb to 15,000 feet in six minutes and to 30,000 before the rate of climb drops to 100 feet a minute. It weighs 2½ tons, tucks its undercarriage beneath it when it takes to the air, carries six Browning machine guns and is considered a handy little thing to have around when bombers come over. The British people saw it in action on Empire Air Day.—Toronto Telegram.

Carried Out His Promise

Admirer Of Roosevelt Ate Editorial Page Made Into Cake

Robert Jones, an admirer of President Roosevelt, thought newspapers were too critical of his policies. He announced that he would eat the first editorial in a Dallas newspaper that spoke kindly of him. The Dallas Journal carried an editorial praising a proposal of Mr. Roosevelt. Jones took the entire editorial page to a chemist, had it converted into glucose and dextrin and baked into a cake. In the presence of a party of friends, including Lynn Landrum, author of the editorial, he ate the cake.

Most of the watches used in aircraft to-day are of Swiss make. These instruments must function perfectly in temperatures changing from plus 33 to minus 10 in a few minutes.

More than 21,000 of a total of 22,459 homes in Bournemouth, Eng., have radios.

CAPE FROCKS ARE SLIMLINING

By Anne Adams

Fashion cries "Bravo" to Anne Adams' utterly charming new dress design garnished with capes—Pattern 4830! How cleverly it gives the figure new slenderness with its striking panels! The centre bodice sections are eased into the pointed waistline of the front panel to produce an unusually flattering softness. Make the cape in self fabric—a filmy sheer or a pliable floral crepe (or a fine lace, if you want contrast), with the neckline bow to harmonize. Whether you choose the capes or the brief sleeves, you'll have a frock to wear everywhere, and so easy to sew that you'll really relish your task.

Pattern 4830 is available in women's sizes 34, 36, 38, 40, 42, 44, 46 and 48. Size 36 takes 4¼ yards 36 inch fabric. Illustrated step-by-step sewing instructions included.

Send twenty cents (20c) in coins (stamps cannot be accepted) for this Anne Adams pattern. Write plainly Size, Name, Address and Style Number and send order to the Anne Adams Pattern Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

Get Rid Of Flies

Not A Single Fly Should Be Permitted To Live

When you consider the millions of flies that may be bred if even one single female house-fly is allowed to mature, it is obvious to what extent these carriers of "typhoid" and other disease germs are a menace to any community where they are permitted to multiply.

Flies are no respecters of persons. The baby in the millionaire's home or the workman's cottage are equally in danger if proper care is not exercised to keep flies from entering the home. Flies frequent the filthiest feeding places outside the home, then, if allowed inside, carry dangerous germs to feeding bottles, liquids, foods, everything that is left exposed.

The important point then is to "clean-up" thoroughly wherever potential breeding places exist—out-of-doors, around the house. And, to make doubly sure, screen all windows and doors and cover all milk and food wherever exposed. If these precautions were followed by everybody, it would go a long way to solve the fly problem. But, we are most of us apt to be thoughtless of others, perhaps, and so the flies have a new lease on life.

If flies do get into your home, a clean, quick way to kill them as they come is to place Wilson's Fly Pads in convenient places around the house till fly-time is definitely over. Just a little care and thoughtfulness for the other fellow is the way to make the health authorities dream of a fly-less community come true.

Bought Personal Things

When Indians received treaty money at The Pas, Man., most of it was spent for personal adornment. The women bought many "bobby pins", rings, bright-hued handkerchiefs, cheap eye-glasses and some finger-nail polish. The men went in for silk socks, neckties and rubbers to wear over their moccasins. 2260

Research May Have Remedy

To Make Harmless The Dust Which Affects Miners

South Wales authorities, like those in some of Canada's hard-rock mining centres, are worried over the high incidence of silicosis among the country's coal miners, especially those employed below ground in the anthracite industry.

Analysis of medical certificates granted those suffering from the dread disease—a lung condition induced by inhaling dust which frequently leads to tuberculosis—shows 4.2 per cent. of those working in anthracite mines contract the disease. The rate for all underground workers in the United Kingdom is .3 per cent. and for South Wales 1.3 per cent.

Dr. David Jones, Professor of Mining at the University College, Cardiff, told the South Wales Institute of Engineering 889 silicosis certificates had been issued in a little more than six years among the 21,333 underground anthracite workers, 1,515 among 116,465 workers in all South Wales mines, and 1,738 among 627,886 underground workers in the whole United Kingdom.

Dr. Jones suggested the possibility of reducing the hazard by minimum use of explosives in mines, contending their use is one of the major causes of noxious dust. He also drew attention to beneficial results attained through use of a respirator to protect workers from dust.

(Research work carried on at the McIntyre gold mine at Porcupine, Ont., in co-operation with the Banting Institute at Toronto, indicated mine dust carrying silica which dissolves in the lung, inducing the disease, may be rendered harmless by spraying aluminum dust into the mines.)

Fully 15,000 trailers, accommodating over 50,000 people, are expected to hit the holiday trail in England this summer.

Giant Flying Boats

Trans-Atlantic Flying To Be Inaugurated This Fall

Giant Imperial Airways flying boats, with a range exceeding 3,000 miles and capable of carrying upwards of 4,000 pounds of mail, will be ready to cross the Atlantic by September. At the same time Pan-American Airways propose to inaugurate service.

At present eight of these craft are on the stocks at Short Brothers' sea-plane works at Rochester, England, and two are so far advanced it is expected they will be passed for tests by early August.

From the water the boats will take off with a load of 48,000 pounds, which could be increased to 53,000 by refuelling in mid-air. Ultimately it is planned to use the boats for passenger traffic but none will be carried on the experimental flights this year.

Meanwhile the overhaul of the Mercury, upper half of the Mayo composite aircraft, is nearing completion in preparation for its Atlantic flight.

Huge Gun

One Of The Largest Guns In The World Being Built In U.S.

With the largest force since wartime employed at Watertown, Mass., arsenal, work is proceeding on the gun-makers' pride and joy—a 16-inch stationary gun for coastal defence.

One of the big guns of the world, it dwarfs the newly developed eight-inch railroad gun and the powerful three-inch anti-aircraft mounts.

Total weight of gun and mounting is 500 tons, but one man, using one hand, can turn a crank which swings the gun on its turnstile. It will fire a projectile weighing more than a ton at a speed of 2,400 feet a second for a distance of 30 miles. To ship it to the coast will require 10 flat cars.

TRUE STORIES OF CHEMISTRY IN EVERYDAY LIFE

By DR. H.G. LITTLER.

From Wood Pulp to Transparent Film

Of the many products made by the chemist using cellulose as a raw material, none has had a more rapid or sensational rise than transparent cellulose film, best known by the trade-name "Cellophane". Made by a

Cellulose Comes From Wood

process invented by Brandenberger, a Swiss chemist working in France, and first used chiefly in making women's hats, this material is now used for literally hundreds of different purposes. Although first made in Canada in 1932, the growth of transparent cellulose film has increased very rapidly.

Transparent cellulose film and rayon are true sisters, both being the children of cellulose from the spruce tree and cotton linters. In the case of rayon, a cellulose solution made by treating purified wood pulp or cotton linters with caustic soda and carbon bisulphide is forced through the microscopic holes of a "spinneret" into a chemical bath, which changes the tiny streams of "liquid cellulose" back into filaments of solid cellulose. In the manufacture of transparent cellulose film, the viscose solution is forced out into the chemical bath through a long narrow slit instead of a spinneret, and the result is a thin film of cellulose. Further chemical and physical operations—bleaching, washing, etc., leave the completed film transparent, sparkling, strong, flexible, odourless, oil-proof, air-proof, gas-proof and germ-proof.

While transparent cellulose film made in this way, and coloured with dyestuffs if desired, found wide application as a wrapping material, chemists soon realized that a way should be found to make this material moistureproof in order to extend its usefulness as a wrapper for

goods which quickly become dry and stale.

After several years of experimental work in the laboratory, a moistureproof film was perfected which led to a revolution in packaging. When wrapped in this moistureproof film, cigars and cigarettes retained their desirable characteristics for a much longer period. The wastage in cakes and other bakery products was greatly reduced because this moistureproof film preserved them. Meats appeared in this new wrapper, thus insuring freshness and cleanliness. The use of moistureproof cellulose film spread to fruits and other perishable foods, until to-day the average grocery store contains dozens of products kept fresh by it. It is generally conceded to-day that this transparent film is an aid to public health since foodstuffs, textiles and other items wrapped in it are not readily contaminated with disease germs.

In addition to its use for wrapping all kinds of articles, transparent cellulose film is used for many other purposes. In the form of narrow ribbons it is woven into attractive fabric for curtains. Fifty thousand yards of sparkling cellulose film were used to make the moonbeams in the motion picture presentation of "A Mid-Summer Night's Dream." In the theatre it has been used for costumes, in the radio world for making sound effects, by surgeons as an outside dressing so that the progress of wounds might be observed, and on the farm as a cover for early plants

(Photo, Canadian Industries Limited)

Winding "Cellophane"

to protect them from sudden changes in the weather. It would seem, in fact, that the usefulness of this sparkling transparent film as a decorative and protective material is limited only by the imagination of the user.

GOLDEN APPLES

It is generally believed now that those golden apples in the old Greek legend were really oranges, the oranges of Spain which were remote and mysterious wonders to the Greeks at that time.

The casualness with which they tossed the heavens from one to another in those days seems amazing but no more amazing than the casualness with which we obtain oranges to-day would have seemed to the ancient Greeks. This one rare fruit comes to us now from much greater distances than the Greeks ever conceived of. Besides the fruit from the United States, we get beautiful oranges from Palestine and the Orient.

Here are two easily-made desserts of quick-cooking tapioca cream, combining eggs, milk, tapioca and oranges to make a wonderfully nutritious dish. Among other food values, oranges contain iron, one of the few elements which milk lacks, so altogether the balance is nearly perfect.

Orange Tapioca Cream

- 1½ cup quick-cooking tapioca
- 1½ cup sugar
- 1½ teaspoon salt
- 4 cups milk, scalded
- 1 egg yolk, slightly beaten
- 1 egg white, stiffly beaten
- 1 teaspoon orange extract
- 4 oranges, sections free from membrane

Combine quick-cooking tapioca, sugar, salt, egg yolk, and milk in top of double boiler and stir enough to break egg yolk. Place over rapidly boiling water, bring to scalding point (allow 5 to 7 minutes), and cook five minutes, stirring frequently. Remove from boiling water. Fold a small amount into egg white; add to remaining tapioca mixture and blend. Cool—mixture thickens as it cools. When slightly cool, add flavoring; chill. Place few sections of orange in bottom of individual serving dishes and cover with tapioca mixture. Garnish with additional orange sections. Serves 8.

Chantilly Orange Tapioca

- 1½ cups water
- 1½ cup quick-cooking tapioca
- 1½ cup sugar
- 1½ teaspoon salt
- 1 cup orange juice
- 1 tablespoon grated orange rind
- 1½ cup cream, whipped

Place water in top of double boiler and bring to a boil over direct heat. Combine dry ingredients; add gradually to water and bring to a brisk boil, stirring constantly. Place immediately over rapidly boiling water and cook five minutes, stirring occasionally. Remove from boiling water—mixture clears and thickens as it cools. When slightly cool, add orange juice and rind. Chill; fold in cream. Pile lightly in sherbet glasses. Just before serving, garnish with very fine ¼-inch shreds of orange rind, free from all white membrane. Serves 6.

He Showed Them

But Effort Of American Aviator Put Him In Hospital

Clyde Pangborn, the aviator, has been working in England this past year for Sir Cunliffe Owen at the British subsidiary of the Canadian Car & Foundry. . . . Some weeks ago Pangborn walked through the factory and saw four laborers trying to lift a car onto a truck. . . . "Look," he offered, "watch how Americans do it, in America." . . . Pangborn placed his hands under the rear fender, bent his knees, and heaved mightily. . . . As a result, he's in the hospital now—and henceforth will be required to use a cane. Pangborn's heave broke his Achilles tendon.

In ancient Egyptian funeral wreaths, botanists can see no less than 20 species of the flowers grown in that day.

Help improve your personality with Wrigley's Gum. Keep your teeth white, breath sweet, by using healthful Wrigley's Gum daily—as millions do. The children also love the delicious refreshing flavor of Wrigley's Double Mint. Take some home today.

WHAT HO!

—By—

RICHARD CONNELL

By Arrangement With Thomas Allen, Publisher, Toronto.

CHAPTER XIII.—Continued

"I warn you, Punder, that defamation of character is a dangerous pastime," bristled Sir Peter. "There are laws—"

"You should know all about the laws," sneered Punder. "You've kept just inside 'em long enough. So come off your high horse, Pete Tyler. You and your crowd are going to listen to some home truths."

Sir Peter and the others sat down, looking sulky and apprehensive. Ernest sat down looking blank.

"I wanted P.P.P. and you knew it," Punder fumed.

"That's not so," declared Sir Peter. "How should I know your plans?"

"I suppose you expect me to believe that you haven't got wind of the fact that I'm organizing E.F. and D.S.," said Punder.

"Never heard of it," said Sir Peter. "Don't even know what it is."

"Empire Food and Drink Syndicate," said Punder, "and when it goes through—and it is going through, 90 per cent. of all the consumers of ale, bacon, jam and other staple foods in Great Britain and her colonies will have to pay tribute to E.F. and D.S.—and that means yours truly."

"Really? And you wanted Purico Pork Products for a link in your chain? Sir Peter said. "Well, why didn't you come to me? You knew I held a controlling interest in P.P.P."

"Because I knew you'd come to me," said Punder. "Well, you fooled me. You knew I'd drive a hard bargain so you rigged up this dummy auction and palmed it off on this gull—" he jerked a thumb at Ernest—"and now that he's got P.P.P., what's he going to do with it?"

"His plans may surprise you, Punder," said Sir Peter. "Mr. Bingley is not alone in this. He has associates—Mr. Otis G. Wyncoop—for example—"

"Hah!" ejaculated Punder. "I've heard of Wyncoop. Dashed good sausage man, too."

"And," went on Sir Peter, "I have been given to understand that unlimited capital is available in the States to back a corporation which will make your little E.F. and D.S. look like a corner grocery."

Punder said "Hah", but it was a weak and worried "Hah."

"Since Mr. Bingley has P.P.P. and I have an engagement, I bid you good-day," said Sir Peter and made ready to leave.

Then Ernest took the brake off his tongue.

"Wait," he said.

"Well?" said Sir Peter.

"You've made a mistake," said Ernest. "I had no intention of buying P.P.P. or A.B.C. of whatever it is for two and a half million dollars—"

"My dear Mr. Bingley," said Sir Peter, and he spoke with frigid finality, "you made a bargain, in the presence of witnesses, and I shall hold you to it. These gentlemen will testify to your bid and its acceptance."

Dr. Van Tromp, Mr. Silver and Sir Mark Newsome, turned suddenly hostile, indicated that they were prepared to tell a judge and jury that Ernest was guilty of breach of promise, and assorted torts.

Then they strode out behind Sir Peter leaving Ernest in the clutches of Hubert Punder. Ernest would have ducked out through the door had not Punder plugged it with his poundage.

"Talk," said Punder.

Ernest resumed his imitation of the Sphinx.

"I'll say something then," said Punder. "Just two words: How much?"

Ernest was as voiceless as a newt. "You can't do anything with P.P.P. and you know it, raged Punder. "This is just another piece of Yankee piracy. Well, speak up. What's the ransom?"

Ernest did not speak up.

"You and your precious combines!" cried Punder. "You and your unlimited capital! Going to buck me, hey? Going to snatch British concerns from under Punder's nose, hey? Well, you can't kick Punder around, see—"

Ernest began to see something quite clearly. He began to see that in that off-hand, informal way natural to men used to the tenet of Big Business that credit is based on reputation, Sir Peter and his fellow conspirators had sold him a property for two and a half million dollars, and now Mr. Punder wanted to buy it from him with no more ceremony than if it were a pound of dog-biscuits.

Of late Ernest had faced the music so often that he would spin round at a piccolo note. He faced the music now, and it was sweet music. A hard, resolute smile came to his face, Mr. Punder saw it. Mr. Punder said, "Well, have you made up your mind just how much you're going to hold me up for?"

Ernest retained his smile but no syllable fell from his lips.

"I'll give you a quick profit of five thousand pounds," said Punder. "Not bad for a day's work, hey?"

Ernest felt that it was indeed adequate compensation for his efforts. Five nods at a thousand pounds a nod certainly made him the highest paid nodder in the world. However, he did not nod. He shook his head.

"Ten thousand. Take it or leave it," said Punder.

Ernest got out a pair of words.

"No go," he said.

Punder's color went from cerise to plum.

"How much do you want?" he snarled.

"Twenty."

"Bare-faced robbery!"

"Twenty."

"You're a crook."

"Twenty."

"You're a scoundrel."

"Twenty."

"All right," said Mr. Punder.

"Twenty it is."

A slow train carried Ernest back to Pennyton. On the way he took out his forgotten lunch. The cheese and pudding had become one grubby blob. He ate the mixture anyhow. It tasted like ambrosia to him.

CHAPTER XIV.

"Father's late for breakfast—and on his birthday, too," said Lady Rosa Bingley. "That's not like Father. He must be in the dumps."

"In the dumps," thought Ernest, came under the head of understatements as a description of the feelings of a man about to be ousted from his ancestral home. He watched Rosa as she drank her morning tea. She looked so pertty and seemed so gay.

"You're a good sport, Rosa," Ernest said.

"I? Why?"

"Acting the way you're acting."

"Father's birthday," she said. "We can get out the sackcloth and ashes later. More tea, Ernest?"

"Yes, thank you."

As she poured the tea, Rosa said,

"When you were in London I took a walk. I went down to our oak tree

and sat in the branches. All by myself. What do you think I found?"

"Squirrels?"

"No."

"Acorns?"

"Yes. Also I found that somebody had carved our initials in the tree—R and E inside a heart."

"Must have been the pookies," said Ernest.

"No doubt. Oh, I say, I hear Father's step. We must sing 'Happy Birthday to You.'"

"What shall I call him?" whispered Ernest, hurriedly. "In the song I mean. I can't sing 'Happy Birthday, dear Early.'"

"Why not just call him Father?" said Lady Rosa and, her cheeks matched the strawberry jam with which she was anointing a muffin.

The Earl of Bingley entered the dining room, smocked for a last potting, and showed no outward signs of inner doldrums.

Rising Lady Rosa and Ernest sang.

"Happy Birthday to you,
Happy Birthday to you,
Happy Birthday, dear Father,
Happy Birthday to you."

The earl grinned and bowed.

"Thank you, thank you, thank you,"

he said, and took his place at the head of the table.

"Great age—sixty," he remarked.

"A man's just old enough to laugh at his youthful follies and just young enough to want to repeat 'em. Pass the coddled eggs, please."

He picked up his napkin.

"My word, what's this?" he exclaimed, holding up some flat packages. He opened the first. It contained a necktie from Rosa, the sort women buy, dove gray with lavender posies on it.

"A million thanks, my dear child. It's just what I needed," said the earl, and put it on at once. The second present was a pair of gaudy braces and a card inscribed, "Many happy returns. C. Crump."

"Thanks most awfully, Crump," said the earl. "I needed these—and how! Been holding my bags up with twine."

He opened the third gift, an envelope. He stared and stared at its contents with that look of extreme surprise known in motion pictures as a "Take-em."

"Tea!" he shouted. "Give me tea!"

"Father! What is it?" cried Rosa.

"The notes! Punder's notes. Marked 'Pail in Full'. Tea! Tea."

"Oh, Father, how wonderful," exclaimed Lady Rosa, and began to cry.

The earl looked as if he were going to cry too, but Crump thrust a cup of steaming tea before him, and that useful national beverage enabled his lordship to hide his feelings.

"Talking of miracles!" said the earl, coming from behind his tea-cup.

"Ernest, my dear young scallawag, if I live to be a hundred, and I fully expect to, I can't thank you enough for what you have done."

"I?" said Ernest.

"I don't mean Donald Duck," said the earl. "Who but you could have been so generous? Besides you're no good at hiding things, you know. You look as innocent as a mouse caught red-handed in a cheese-monger's, that is, if one can catch a mouse red-handed. Stop blubbing, you big baby, and eat your coddled-eggs—"

"I'll blub-blub-blubber if I want to," returned his daughter.

"Blubber on, my little gypsy sweetheart," said the earl. "But you might cease firing long enough to thank Ernest."

"I do thank Ernest," said Rosa, smiling through her tears. "I thank you, Ernest, with all my heart."

"Forget about it," said Ernest. "It wasn't much to do for you—I mean—since I'm a sort of Bingley, too—you might say—"

"I do say," said the earl. "You're a doubled-barreled, high-calibre, true Bingley—and no mistake. I never tasted better coddled eggs. Have some more, Ernest."

"Thank you, sir."

"And," said the earl, lading out the eggs, "I'll pay you back. I can't say when. Fact is we've barely enough to keep up the old place as it is. However, if the apple crop is good, and the hens lay, I think we'll be able to pay you the interest."

"Never mind the interest," said Ernest.

"Oh, go get yourself measured for a halo and a harp," said the earl. "Of course I'll pay the interest. Blast it, there I've gone and spilled egg on my nice new tie."

MOST MILES PER DOLLAR

Canadian Artists

Wider Representation In National Gallery Is Urged

Wider representation of Canadian artists in the national gallery at Ottawa was urged in the House of Commons by Opposition Leader Bennett.

Mr. Bennett thought several ranking Canadian artists had been overlooked and that there were some pictures on display that did not "dignify" the gallery. He also suggested one picture labelled "Van Dyck" which he thought should have the word "after" placed in front of the artist's name.

Works Minister Cardin agreed Canadian artists should be encouraged to every possible extent. He would refer Mr. Bennett's remarks to the board of trustees.

"The last time I visited the gallery," Mr. Bennett said, "I certainly found a dearth of pictures by one or two artists who, I think, might fairly be classified as ranking Canadian artists."

"There is a substantial number of Canadian artists who are not at all adequately represented in the gallery. On my last visit I tried to make effective criticism of some pictures there but did not succeed."

"Certainly they do not dignify the gallery, whereas some of the paintings by those who are not represented would ornament almost any gallery in the world. It would be unfair to particularize."

For A Better Balance

Unwarranted Pessimism Is Always A Destructive Force

In what might be referred to loosely as "Pre-Depression" days much was heard of the tremendous resources, remarkable accomplishments, and promising future of this Dominion. Since that time, a more gloomy outlook has apparently become fashionable on the part of a good many persons. The accomplishments are overlooked, the achievements minimized, and only dark days are seen ahead.

It seems unfortunate that a more balanced outlook could not be maintained. Unbounded optimism has undoubtedly played a part in creating some of the problems Canada is facing to-day—but the opposite outlook of unwarranted pessimism is certainly as destructive, if not more so.

—Frederick Gleaner.

Bearded faces became so fashionable in 14th century Spain that many men wore false beards of various shapes and colors to match their clothes or moods.

Can Be Overdone

Pastures Likely To Be Impoverished By Too Much Grazing

One way to clear brush and weeds from land is to turn in goats enough to keep the bushes stripped bare and the weeds clipped close to the ground until the roots have starved, says A. T. Semple, of the United States Soil Conservation Service. "But," he adds, "unintentional use of practically this same plan is responsible for the impoverishment and erosion of many desirable pastures."

Many farmers, he points out, graze so many animals on their grasslands for so long a season that the tops of the good grass plants have no chance to feed the roots and store food reserves necessary for growth. The result is disappearance of the best grasses and a lowering of grazing in quality and quantity. The remaining thin cover of grass or weeds holds less of the rain that falls. As a consequence, such close-cropped pastures are likely to suffer erosion by wind and water.—St. Thomas Times-Journal.

Resort hotels often mark "A" on the register after names of persons favorably known to the management. "B" after honest looking strangers and "C" after those whose status is in doubt.

The word "bedlam" comes from a corruption of the name Bethlehem, a lunatic asylum in London.

I found sweetening my morning cereal with BEE HIVE Syrup aids digestion.
